

Situation: NetApp had a broad AI and analytics portfolio with strong NVIDIA partnerships, validated reference architectures, and a defensible competitive position. The sales team needed to sell it. There was no structured enablement to educate them on the newest products.

Complication: The portfolio spanned two distinct motions, AI infrastructure and Modern Data Lake, each with different buyer personas, qualifying signals, objection patterns, and competitive dynamics. A single rep could face a CDO asking about GenAI data pipelines in the same week they faced an IT infrastructure lead asking about StorageGRID object storage. The course had to give reps enough technical grounding to qualify intelligently, enough persona knowledge to navigate multi-stakeholder deals, and enough competitive depth to handle Pure, DDN, Dell EMC, and Vast without flinching. It also had to do this across five target verticals without becoming a reference manual no one reads.

Resolution: The course was built as a seven-module curriculum and companion to an AI playbook. It covered AI overview, portfolio positioning, five buyer personas, discovery and qualification frameworks, objection handling, and competitive intelligence. It was structured around decision points a rep actually faces: who is in the room, what signals indicate a real opportunity, what objections will surface, and which NetApp product maps to which customer scenario. The PMM SME drove the content. The learning strategist built the architecture. Knowledge checks at every module close forced retention rather than passive consumption.

[Scroll down to see the details](#)

Selling NetApp AI and Analytics

 **NetApp**

About this course

This course focuses on enabling you to do the following:

- Recognize why customers consider change
- Position NetApp AI and Analytics solutions
- Articulate the unique value of NetApp AI and Analytics solutions
- Identify potential buyer personas

Course modules

1. AI and Analytics overview
2. Why NetApp?
3. Buyer personas
4. Discovery and qualification
5. Positioning
6. Objection handling
7. Competitive intelligence

The background of the slide features a series of overlapping, semi-transparent blue geometric shapes, primarily chevrons and zig-zags, that create a sense of depth and movement. These patterns are concentrated on the right side of the slide, while the left side is a solid, lighter blue.

AI overview

About this module

This module focuses on enabling you to do the following:

- Provide a high-level overview of AI
- Interpret market trends
- Discuss the challenges that influence customers' buying decisions

Introduction to Artificial Intelligence

“Artificial Intelligence (AI) has
moved well beyond prototyping
and into the phase of execution
and implementation.”

- IDC Customer Insights and Analysis

NetApp AI introduction video

Current AI market trends

Worldwide Artificial Intelligence software revenue snapshot

Customer challenges for AI

Customer challenges for AI

Customer challenges for AI

Customer challenges for AI

Knowledge check: AI and Analytics overview, question 1

Which of the following is a Deep Learning model?

- a. Current neural networks
- b. Convolutional neural networks**
- c. Regenerative neural networks
- d. Concurrent adversarial networks

Knowledge check: AI and Analytics overview, question 2

As per IDC predictions, what is the CAGR for AI market growth from 2020 to 2025?

- a. 12.5 %
- b. 15.8 %
- c. 17.7 %**
- d. 22.1 %

Why NetApp AI?

About this module

This module focuses on enabling you to do the following:

- Discuss how NetApp solves challenges with AI and analytics solutions
- Present NetApp AI portfolio
- Identify NetApp AI key benefits
- Discuss AI use cases

**“NetApp is the leader in AI storage and
NVIDIA is the leader in AI compute.”**

- Mart Hull, Vice President, Global AI Data Center
Solutions Sales, NVIDIA

NetApp AI portfolio

NetApp and NVIDIA portfolio

NetApp ONTAP AI

Reference architecture

Certified for success with maximum flexibility

(Others: FlexPOD AI, E-Series AI, ONTAP with Lenovo, ONTAP with Fujitsu)

Integrated solution

Easy to procure and installed onsite with premium support

NVIDIA DGX Foundry and NetApp

Fully managed

Subscription-based service for AI development infrastructure

Premium development experience

NVIDIA DGX SuperPOD with NetApp

World-Class AI infrastructure

Certified for success with HPC/NLP workloads

Massive scale supercomputing

NVIDIA AI Enterprise with NetApp

AI for any organization

Mainstream AI for a wide variety of enterprise workloads

AI for enterprise operations

Existing and greenfield deployments

Turnkey solution for rapid deployment

Field-proven design formula

NetApp AI benefits

Improve model accuracy at scale

Hybrid cloud AI training

Collaboration, reproducibility
and traceability

Faster ROI,
reduced TCO

NetApp AI use cases

Natural Language
Processing

Computer Vision

High Performance
Computing

NetApp AI use cases

Natural Language Processing

Insurance provider

Natural language processing and advanced analytics to predict health risks, identify target programs, and deliver operational efficiencies

National retailer

Deploying AI solutions to support NLP and multi-modal recommendation to support customized shopping experiences. Enabling build AR customer tools

Stock market

Financial sentiment analysis looks at social media to determine how people feel about recent news to predict whether a stock will rise or fall.

Healthcare

To improve patient diagnosis, use to analyze speech patterns to detect brain injuries and illnesses, such as Alzheimer's and dementia

Law enforcement

Use NLP to monitor and analyze social media conversations and to alert law enforcement officials when signs of terrorism are uncovered.

NetApp AI use cases

Computer vision

Automotive manufacturer

Computer vision powered defect detection systems. Photographs and sound recordings of manufactured parts are captured at the point of assembly, and defects can be repaired while still on the line

Retail store

Computer vision can track and count the number of people in line and automatically sound an alert to open more checkouts when a threshold has been reached.

Multinational financial services

Fully automated AI/ML aaS to support fraud detection, loan analysis, financial trading analytics, and regulatory and compliance reporting

NetApp AI use cases

High Performance Computing

Media and entertainment

Use HPC solution to meet customer's growing expectation for media and entertainment. Spotless visual effects in the feature films. Watch every moment of a live telecast and replays non-stop.

Ranked college of engineering

Built an interconnected, multi-capable research storage environment for automotive research and architectural engineering

Cybersecurity firm

Leveraged existing compute environment to create a unified data repository, allowing them to leverage a suite of proprietary analytics tools

Healthcare

creation of a noninvasive robotic arm controlled by the brain, a potentially life-changing breakthrough for people living with paralyzed limbs.

Knowledge check: Why NetApp AI?, question 1

What are the benefits of using NetApp AI? (choose 2.)

- a. Improved model accuracy at scale
- b. Configure AI infrastructure with Ansible integration in 20 minutes
- c. Increased TCO
- d. Copy datasets in hours

Knowledge check: Why NetApp AI?, question 2

Which field of AI trains computers to capture and interpret information from image and video data?

- a. Natural Language Processing
- b. High Performance Computing
- c. Computer vision**
- d. Knowledge capture

NetApp AI buyer personas

About this module

This module focuses on enabling you to do the following:

- Identify the buyer types for NetApp AI
- Understand the issues that buyers face

Target buyer persona: AI Leads

Titles:

Head of AI, Chief Data Officer, AI CoE

Responsibilities

- Deliver projects on time and under budget
- Maintain volume, variety, and velocity of data

Challenges and requirements

- Staffing concerns
- Governance of data and AI systems
- Convert research products into production
- Overcome chasm of failed AI projects

Target buyer persona: AI creators

Titles:

Data Scientist, ML Engineer, AI Research Scientist

Responsibilities

- Ensure data availability and utilization
- Meet the key project benchmarks

Challenges and requirements

- Seamless application performance and data availability, accessibility, and security
- Turn raw data into insights to make money, save money or reduce risk

Target buyer persona: Executives

Titles:
CIO, CTO, CEO

Responsibilities

- ☐ Stock price / shareholder value
- ☐ Market share growth
- ☐ AI ROI and balanced cost/benefit

Challenges and requirements

- ☐ Minimizing risk to protect broad business goals
- ☐ Find solutions to simplify and add value

Target buyer persona: Infrastructure leads

Titles:

IT Infrastructure Lead, VP/Director of IT,

Responsibilities

- Reduce storage footprints
- Reduce cost

Challenges and requirements

- Build scalable production environment
- Maintain production workloads to SLAs

Target buyer persona: Business leads

Titles:
LOB owner

Responsibilities

- ☐ Reduce time to market
- ☐ Revenue growth
- ☐ Market share growth
- ☐ Customer satisfaction

Challenges and requirements

- ☐ Compliance and regulations
- ☐ Keep pace with technology innovation
- ☐ Meet customer needs
- ☐ Deliver actionable insights

Knowledge check: NetApp AI buyer personas, question 1

Which tasks does an AI creator perform? (Choose two.)

- a. ensure data availability and utilization**
- b. maintain volume, variety, and velocity of data
- c. meet the key project benchmarks**
- d. revenue growth
- e. ensure customer satisfaction

Knowledge check: NetApp AI buyer personas, question 2

What challenges does an AI lead face? (Choose two.)

- a. **Convert research products into production**
- b. Meet customer needs
- c. Minimizing risk to protect broad business goals
- d. Build scalable production environment
- e. **Overcome chasm of failed AI projects**

**Discovering and qualifying
sales opportunities**

About this module

This module focuses on enabling you to do the following:

- Identify potential customers for NetApp AI solution
- Discover the needs of potential customers by using open-ended questions
- Qualify sales opportunities for NetApp AI solution

Key target verticals for NetApp AI

Government and public sector

Financial services

Healthcare and Life Sciences

Manufacturing

Automotive

Tips to discover sales lead for NetApp AI

Customers to focus on

Deployed NVIDIA DGX(s), GPUs

Expanding HPC clusters

Wants to use AI/ML in a hybrid cloud environment

Looking to transition off legacy Hadoop

Exploring AI use cases

Comparing AI cloud vs. on-prem

AI budget delayed

Competitor using same partner(s)

Avoid

Not sure about AI

Has not heard of NVIDIA or GPUs

Doing AI on laptops

Very minimal storage requirements

Qualifying questions

1

How do you manage your AI workflows?

2

NetApp AI solution

Key products such as DataOps toolkit, and AI Control Plane can help manage AI workflows

Qualifying questions

1

Are you looking for a solution to reduce operational risks in your enterprise?

2

NetApp AI solution

ONTAP AI, FlexPod A, E-Series, and StorageGRID provides the capabilities to implement predictive maintenance, perform risk analysis, use sentiment and behavior recognition.

Qualifying questions

1

What optimizing techniques do you use for AI inferencing across the edge and cloud?

2

NetApp AI solution

ONTAP AI, Lenovo Edge, NetApp Cloud Volumes ONTAP, and CloudSync together provides a best solution to optimize AI inferencing.

Qualifying questions for NetApp AI customers

Are you using GPUs or DGX systems?

Do you have a data science team?

Do you have issues moving data?

What's your data set size?

Do you have reproducibility or collaboration challenges?

How do you manage your AI workflow?

What are your AI/ML/DL use cases?

Knowledge check: Discovering and qualifying sales opportunities, question 1

Which two types of customers are potential customers for NetApp AI solution? (Choose two.)

- a. Customers with deployed NVIDIA DGX(s) or GPUs**
- b. Customers that have 50 TB or less storage requirements
- c. Customers doing AI on laptops
- d. Customers wanting to transition off Hadoop systems**

Knowledge check: Discovering and qualifying sales opportunities, question 2

What tasks can AI perform to modernize and drive transformations in the Healthcare industry?

- a. Operate fraud detection, creditworthiness assessment, and product innovation
- b. Automate administrative tasks, streamline diagnoses, fast-track treatment research**
- c. Operate military drones, track infectious diseases, and monitor bacteria in water supplies
- d. Maintenance and quality control, manage process, efficiency, and supply chain

NetApp AI positioning

About this module

This module focuses on enabling you to do the following:

- Identify factors that guide customers to use NetApp AI solutions
- Position NetApp AI infrastructure solution

Identify correct AI infrastructure

Customer scenarios

Scenario 1

Customer wants to train models on premises to get a function that gives the desired output

Scenario 2

Customer wants to:

- Perform data analytics using Hadoop or Spark.
- Perform high-performance computing.
- Consolidate data in a single data lake.

Scenario 3

Customer has already done all the training and used all the computing power. Now, only needs to execute.

Position an AI infrastructure solution

Customer needs

	AI Model Training	HPC, Analytics	Data Lake	AI Inferencing
Needs	• Process of creating a Machine Learning (ML) algorithm • Deep Learning (DL) framework and training dataset • Compute and data intensive • Requires GPUs	• Parallel file system required • Low cost, high performance • Reduce completion time of single workload • Requires GPUs	• Data ingest from multiple sources • Natural format data repository • Structured and unstructured	• Process of using a trained ML algorithm to make a prediction • Not compute and data intensive • Requires GPU cards/CPUs
Use Cases	DL, NLP, imaging, bots, fraud detection, smart cars/floors/cities	Big Data apps, single workload, simulation, oil & gas, geonomics	Architecture for AI/Analytics, Applications, archival, tiering,	Cashier-less payment, kiosk imaging, quality control

Position an AI infrastructure solution

Data center or cloud infrastructure?

Position an AI infrastructure solution

Platform

CyberAgent®

- 01 Accelerate AI development
- 02 Build an AI learning platform
- 03 Allow multiple engineers to run learning tasks at the same time

- 01 Use GPU server NVIDIA DGX A100 and the high-end NetApp AFF A800 All-Flash Array
- 02 Generate higher revenue
- 03 4x cost performance

- 01 Provide a more agile development infrastructure
- 02 Clone running VM templates within no time
- 03 Reduced storage cost

- 01 NetApp® AFF A300 nodes and compute servers running as a KVM host provides easy expansion
- 02 NetApp REST API allows solution control from the outside and enable near-instant cloning
- 03 NetApp FlexClone® technology provides instant cloned VM and requires less space with reduced storage cost

Knowledge check: NetApp AI positioning, question 1

Which NetApp AI solution is suitable for a customer that wants AI as a service (AlaaS) and test?

- a. FlexPod AI
- b. Equinix, Core Scientific, and NVIDIA DGX Foundry with NetApp**
- c. CVO, CVS, and StorageGRID
- d. StorageGRID, XCP, and Flash Cache

Knowledge check: NetApp AI positioning, question 2

Which of the following are the use cases for AI model training?

- a. Big Data apps, single workload, simulation, oil & gas, and geonomics
- b. Architecture for AI and Analytics, applications, archival, and tiering,
- c. Cashier-less payment, kiosk imaging
- d. deep learning, natural language processing, self-driving cars, and image processing**

Module summary

This module focused on enabling you to do the following:

- Identify factors that guide customers to use NetApp AI solutions
- Position NetApp AI infrastructure solution

Objection handling

About this module

This module focuses on enabling you to do the following:

- Provide counterpoints and guidance for difficult conversations centered on customer objections

NetApp is an infrastructure company. Why do I need to care about the infrastructure for my AI project?

- NetApp all-flash storage supports 2GBps of sustained throughput
- NetApp allows GPUs to operate at over 95% utilization

We're still evaluating the AI use cases for our business, and it is not clear what the value will be. We need to focus on that before considering our storage infrastructure.

- NetApp's AI program offers bespoke AI ideation workshops.
- The workshops structure the available options for the customer's strategic AI initiatives

We're new to AI, so we know that we need to be agile and scalable in a way that a traditional infrastructure company just can't provide.

- NetApp AI solutions removes bottleneck at the edge, core, and cloud
- NetApp DataOps Toolkit simplifies the various data management tasks and runs in both cloud and on-premises
- Amazon FSx for NetApp ONTAP streamlines data science and provides consistent hybrid cloud experience
- NVIDIA DGX Foundary and NetApp offers premium AI development experience

We are focusing on our software stack right now, and that is complicating enough without worrying about our storage vendor.

- NetApp work closely with partners like Domino Data Lab and Run:AI, and SFL Scientific, to develop joint solutions

Module summary

This module focused on enabling you to do the following:

- Provide counterpoints and guidance for difficult conversations centered on customer objections

Competitive intelligence for NetApp AI

About this module

This module focuses on enabling you to do the following:

- Differentiate NetApp AI solutions against competitors

NetApp AI competitive landscape

	 NetApp	 PURESTORAGE	 DELL EMC	 IBM	 DDN AI - BIG DATA - HPC	 WEKA	 VAST
Industry Analysis	• ONTAP AI tested and documented solution with NVIDIA • Certificated NVIDIA SuperPOD : E-Series with BGFS • Industry's first enterprise-grade storage validated by the National Security Agency • #1 file storage in Coldago Study	Offers "AIRI Mini" for small AI-ready data centers, "Hyperscale AIRI" as a supercomputer solution and "AIRI" as an intermediate solution	• Largest storage industry installed base and always included on the short list for AI solutions due to account penetration • PowerScale and AI ready nodes	• Leader in AI solutions portfolio with servers, network, storage • Supercomputer leader of Top500	• Challenger Gartner 2021 MQ for primary storage • IDC 2019 fastest growing AFA vendor based on acquisitions	• Offers a scale-out distributed parallel file system targeting data intensive apps like AI. • Visionary Gartner 2021 MQ for distributed file systems and object storage	• Startup with growing sales and unicorn >\$1B valuation • Recognized in the Gartner cool vendors in storage and backup and recovery 2020
Solution Position	• End to End AI Data Pipeline: (DataOps Toolkit and AI Control Plane).	Accelerating AI with architecturally optimized solutions that work with existing data centers	• Dell EMC ready solutions for AI speed innovation, simplify deployment.	• IBM AI reference architectures: Power servers, IBM spectrum computing, IBM spectrum scale	• Designed for AI and DL, A³I™ solutions deliver extreme performance to NVIDIA	• Weka IO software is resold by HPE also partnerships with AWS, Dell EMC, NVIDIA	• Universal file and object for all data tiers • Tested to 92GB/s with NVIDIA GPUDirect

Software feature comparison

Functionality	NetApp AFF / FAS	Dell EMC PowerScale / Isilon	Pure Storage FlashBlade	IBM Spectrum Storage for AI	DDN A ³ I	VAST Data Universal Storage

Public Cloud	Cloud Native Data Fabric	No Native Cloud Solution	No Native Cloud Solution	No Native Cloud Solution

Knowledge check: Competitive intelligence for NetApp AI, question 1

Which front-end protocols does NetApp AFF and FAS supports?(Choose three.)

- a. Hadoop data file system (HDFS)
- b. Docker
- c. NVMe/FC**
- d. Network file storage (NFS)**
- e. OpenStack
- f. Simple storage service (S3)**

Knowledge check: Competitive intelligence for NetApp AI, question 2

According to NVIDIA's partner page, which four storage vendors have the Elite partnership level?

- a. NetApp, DDN, IBM, and Pure Storage
- b. NetApp, DDN, Vast Data, and Pure Storage**
- c. NetApp, Dell EMC, DDN, and Pure Storage
- d. Dell EMC, DDN, Vast Data, and Pure Storage

Module summary

This module focused on enabling you to do the following:

- Differentiate NetApp AI solutions against competitors

Section 2 - Modules

- Introduction to Analytics and Modern Data Lake (MDL)
- Why NetApp MDL?
- Buyer personas for MDL
- Discovering and qualifying sales opportunities for NetApp MDL
- NetApp MDL positioning
- Objection handling for MDL
- Competitive intelligence for NetApp MDL

Introduction to Analytics and Modern Data Lake (MDL)

About this module

This module focuses on enabling you to do the following:

- Provide a high-level introduction to analytics and MDL
- Interpret market trends
- Examine the challenges that influence customers' buying decisions

What is a unified data lake? ..

A unified data lake is a storage repository that holds a vast amount of raw data in its native format until it is needed.

- Tech Target

Data lake components

Modern data lake overview...

A Modern data lake overcomes the challenges to access data from disparate systems of record, from multiple business owners and applications, while making that data easily accessible, with the correct privileges, appropriate structure, management and protection

Data analytics overview

- Data analytics is the process of analyzing the raw data (real-time, historic, unstructured, structure, qualitative) to identify meaningful, actionable insights, which can be used to inform and drive smart business decisions.

Types of data analytics

Descriptive
(What happened?)

Diagnostic
(Why did it happened?)

Predictive
(What is likely to happen in future?)

Prescriptive
(What is the best course of action?)

Data lake market trends

2.5 quintillion bytes of data are produced every day. 63 exabytes of data will be generated each day as of 2025.

The data lakes market value is expected to reach USD 17.60 billion by 2026, 29.9% CAGR.

By 2026, large enterprises will triple their unstructured data capacity.

By 2025, 60% of the global unstructured data storage capacity will be deployed as software-defined storage (SDS).

Customer challenges with data lakes

Exponential data
growth

Inaccessible data

Integrate data from
different resources

Cost to access data

Create business value
from data

Security and
governance

Knowledge check: Introduction to Analytics and (MDL) (Question 1)

As per Data Lakes Market Report 2021 - Global Forecast to 2026, what is the compound annual growth rate (CAGR) for data lakes market growth from 2020 to 2026?

- a. 12.5%
- b. 25.8%
- c. 29.9%**
- d. 32.1%

Knowledge check: Introduction to Analytics and (MDL) (Question 2)

Which type of data analytics shows the different actions that a company might take?

- a. Descriptive analytics
- b. Diagnostic analytics
- c. Predictive analytics
- d. Prescriptive analytics**

Module summary

This module focused on enabling you to do the following:

- Provide a high-level introduction to analytics and MDL
- Interpret market trends
- Examine the challenges that influence customers' buying decisions

Why NetApp Analytics?

About this module

This module focuses on enabling you to do the following:

- Discuss how NetApp solves challenges with analytics solutions
- Present NetApp portfolio
- Identify key benefits
- Discuss use cases

NetApp analytics portfolio

Portfolio strength:

NFS file access, Cloud Storage (CVO, CVS, FSXn, ANF), and Object Storage with StorageGRID (S3)

Data fabric vision and execution:

Data movers (CloudSync) provides seamless movement of the right data to the right place at the right time in the right format

Hybrid cloud leader:

Cloud connectivity, tiering and cloud storage is key to modernization of data management architecture

API driven:

Maximize customization and flexibility

Use intelligence at the edge

Provide power training in the core

Accelerate analysis in the cloud

ONTAP Select

Lenovo Inferencing

Astra Data Store

SnapMirror FlexCache

E-Series AI (SuperPOD)

FlexPod AI

NetApp ONTAP AI

ONTAP AI software tools

AWS Outposts

Anthos

Microsoft Azure

StorageGRID

Colos

NVIDIA DGX Foundry

spot

FSX

Camunda

NetApp ONTAP AI integrated infrastructure

**AI expertise from NVIDIA
and NetApp**

**Fully configured and
installed**

**Simple
support model**

NetApp StorageGRID

- Software-defined object storage
- Secure and durable storage at scale
- Policy-based information lifecycle management at scale
- Geo-redundant and multi-site
- Cloud integrated: mirroring, notification, search

NetApp modern data lake solutions benefits

Data availability at edge,
core, and cloud

Run real-time analytics &
AI

Increased collaboration with a
centralized data repository

Optimize performance

Reduce risk

Modern data lake use cases

Evolution of analytics

Batch | Classic Arch.

Stream, dis-aggregated
Kubernetes

Analytics for AI

Batch | Classic Arch.

AI training/inference
Kubernetes, AI Ops

Organized data lake for AI

Data Lake

Consolidated data

Knowledge check: Why NetApp Analytics? (Question 1)

What are the two benefits of NetApp modern data lake solutions? (Choose two.)

- a. **Data availability at edge, core, and cloud**
- b. **Optimize performance**
- c. increased TCO
- d. Increased team dissociation with a centralized data repository

Knowledge check: Why NetApp Analytics? (Question 2)

Which NetApp analytics portfolio products are used in the core for data preparation operations? (Choose two.)

- a. **NetApp ONTAP AI**
- b. NetApp StorageGRID
- c. **NetApp ONTAP AI**
- d. NetApp Cloud Volumes ONTAP

Module summary

This module focused on enabling you to do the following:

- Discuss how NetApp solves challenges with analytics solutions
- Present NetApp portfolio
- Identify key benefits
- Discuss use cases

Buyer personas for MDL

About this module

This module focuses on enabling you to do the following:

- Identify the buyer personas for NetApp modern data lake
- Discover the issues that buyers face

Target buyer persona: Data consumers

Titles

Line-of-Business (LOB) Leaders, Business Analysts,
Data Scientist, Chief Data Officer (CDO)

Responsibilities

- Deliver projects on time and under budget
- Project revenue growth
- Retain the customers

Challenges and requirements

- Access to data in usable format
- Deliver useful data dashboards
- Autonomy from IT Ops
- Quick response to changing business needs

Target buyer persona: Data providers

Titles

IT Infrastructure team, Data Architect, Data Engineer

Responsibilities

- Reduce TCO and improve ROI
- Maintain internal customer satisfaction

Challenges and requirements

- Lower cost
- Improve security
- Eliminate unnecessary data replication and movement
- Build infrastructure flexibility

Target buyer persona: Executives

Titles

Chief Information Officer (CIO), Chief Technical Officer (CTO), or Chief Executive Officer (CEO)

Responsibilities

- Improve market share growth
- Ensure customer retention and satisfaction
- Improve operating efficiency

Challenges and requirements

- Align the business and technology goals
- Manage employee engagement
- Adapt new market trends

Knowledge check: Buyer personas (Question 1)

What are two responsibilities a data consumer? (Choose two.)

- a. ensure data availability and usage
- b. maintain volume, variety, and velocity of data
- c. project revenue growth**
- d. retain the customer**

Knowledge check: Buyer personas (Question 2)

What are two challenges that executives face? (Choose two.)

- a. **Align business goals and technology goals**
- b. meet customer needs
- c. build a scalable production environment
- d. Build infrastructure flexibility
- e. **Adapt new market trends**

Module summary

This module focused on enabling you to do the following:

- Identify the buyer personas for NetApp modern data lake
- Discover the issues that buyers face

**Discovering and qualifying
sales opportunities for
NetApp MDL solutions**

About this module

This module focuses on enabling you to do the following:

- Recognize the verticals to focus on
- Identify potential customers for NetApp MDL solutions
- Discover the needs of potential customers by asking open-ended questions
- Qualify sales opportunities for NetApp MDL solutions

Key target verticals for NetApp MDL solutions

Government and public sectors

Financial services

Healthcare and life sciences

Manufacturing

Automotive

Tips to discover sales leads for NetApp MDL solutions

Customers who are primary candidates are those who:

- Are looking to transition off legacy Hadoop
- Have already deployed NVIDIA DGXs or GPUs
- Are ready to build an AI pipeline for long-term AI processing
- Want to reduce storage costs for maintaining large volumes of data
- Want to use AI and machine learning (ML) in a hybrid cloud environment
- Have multiple data sources for data ingestion
- Want to reduce data movement and data preparation

Qualifying questions

Are you looking for a solution to reduce operational risks in your enterprise?

NetApp MDL solution

NetApp ONTAP AI, a FlexPod solution, NetApp E-Series, and the StorageGRID object-based storage solution provide the capabilities to implement predictive maintenance, perform risk analysis, and use sentiment and behavior recognition.

Qualifying questions

How do you manage data availability both on-prem and in the cloud?

NetApp MDL solution

Key products such as the NetApp Cloud Volumes ONTAP, NetApp Cloud Sync, and SnapMirror can help manage data both on-prem and in the cloud.

Qualifying questions

How many data sources do you use for data ingestion?

NetApp AI solution

NetApp E-Series, and the StorageGRID object-based storage solution together provide the best solution to create a single source of data with single security model.

Other qualifying questions for NetApp MDL customers

Who owns the data lake from a business perspective?

What business outcomes does your data lake support?

Do your end users have access to the data they need, when they need it?

Do you have a separate data engineering group?

What is your data lake strategy?

How do you manage your analytics and AI workflows?

What are your analytics use cases?

Do you have a hybrid strategy that you'd like to apply to analytics initiatives?

Knowledge check: Discovery and qualification (Question 1)

What are two types of potential customers for NetApp AI solutions? (Choose two.)

- a. customers with deployed NVIDIA DGXs or GPUs**
- b. customers that have 50TB or less storage requirements
- c. customers who have single source of data ingestion
- d. customers who want to build an AI pipeline for long-term AI processing**
- e. customers who want to have more data movement

Knowledge check: Discovery and qualification (Question 2)

Which set of tasks can data analytics perform to modernize and drive transformations in the government and public sector?

- a. operate fraud detection, credit-worthiness assessments, and product innovation
- b. automate administrative tasks, streamline diagnoses, and quicken treatment research
- c. exercise maintenance and quality control; manage processes, efficiency, and supply chain
- d. update the policy development, enforce the law, mitigate insider threats, and protect citizen data**

Module summary

This module focused on enabling you to do the following:

- Recognize the verticals to focus on
- Identify potential customers for NetApp MDL solutions
- Discover the needs of potential customers by asking open-ended questions
- Qualify sales opportunities for NetApp MDL solutions
